

VFX / Camera: Fade from black
(thermal cursor flash) -> Cut to Live Action.

A cinematic scene set in a dark, narrow hallway with peeling paint and posters on the walls. Two police officers in blue uniforms and tactical gear are the central figures. The officer on the left is aiming a rifle, while the officer on the right is reaching towards a door. Both are wearing head-mounted thermal vision devices, which project green crosshairs and numerical data onto the scene. The lighting is low and blue-toned, with a single light source visible in the distance. The overall mood is tense and investigative.

Water seepage complaints...
why is it always so hard to trace the source?

VFX / Camera: Low-angle interior.
Push in with slight handheld documentary shake.
Audio cue: Distinct, echoing dripping sound.

Invisible to the naked eye.
Pipes are buried deep within the walls.

VFX / Camera: Hard cut to Infrared POV.

● REC: 00:00:03

VFX / Camera: Infrared sweep smoothly panning across the ceiling structure.

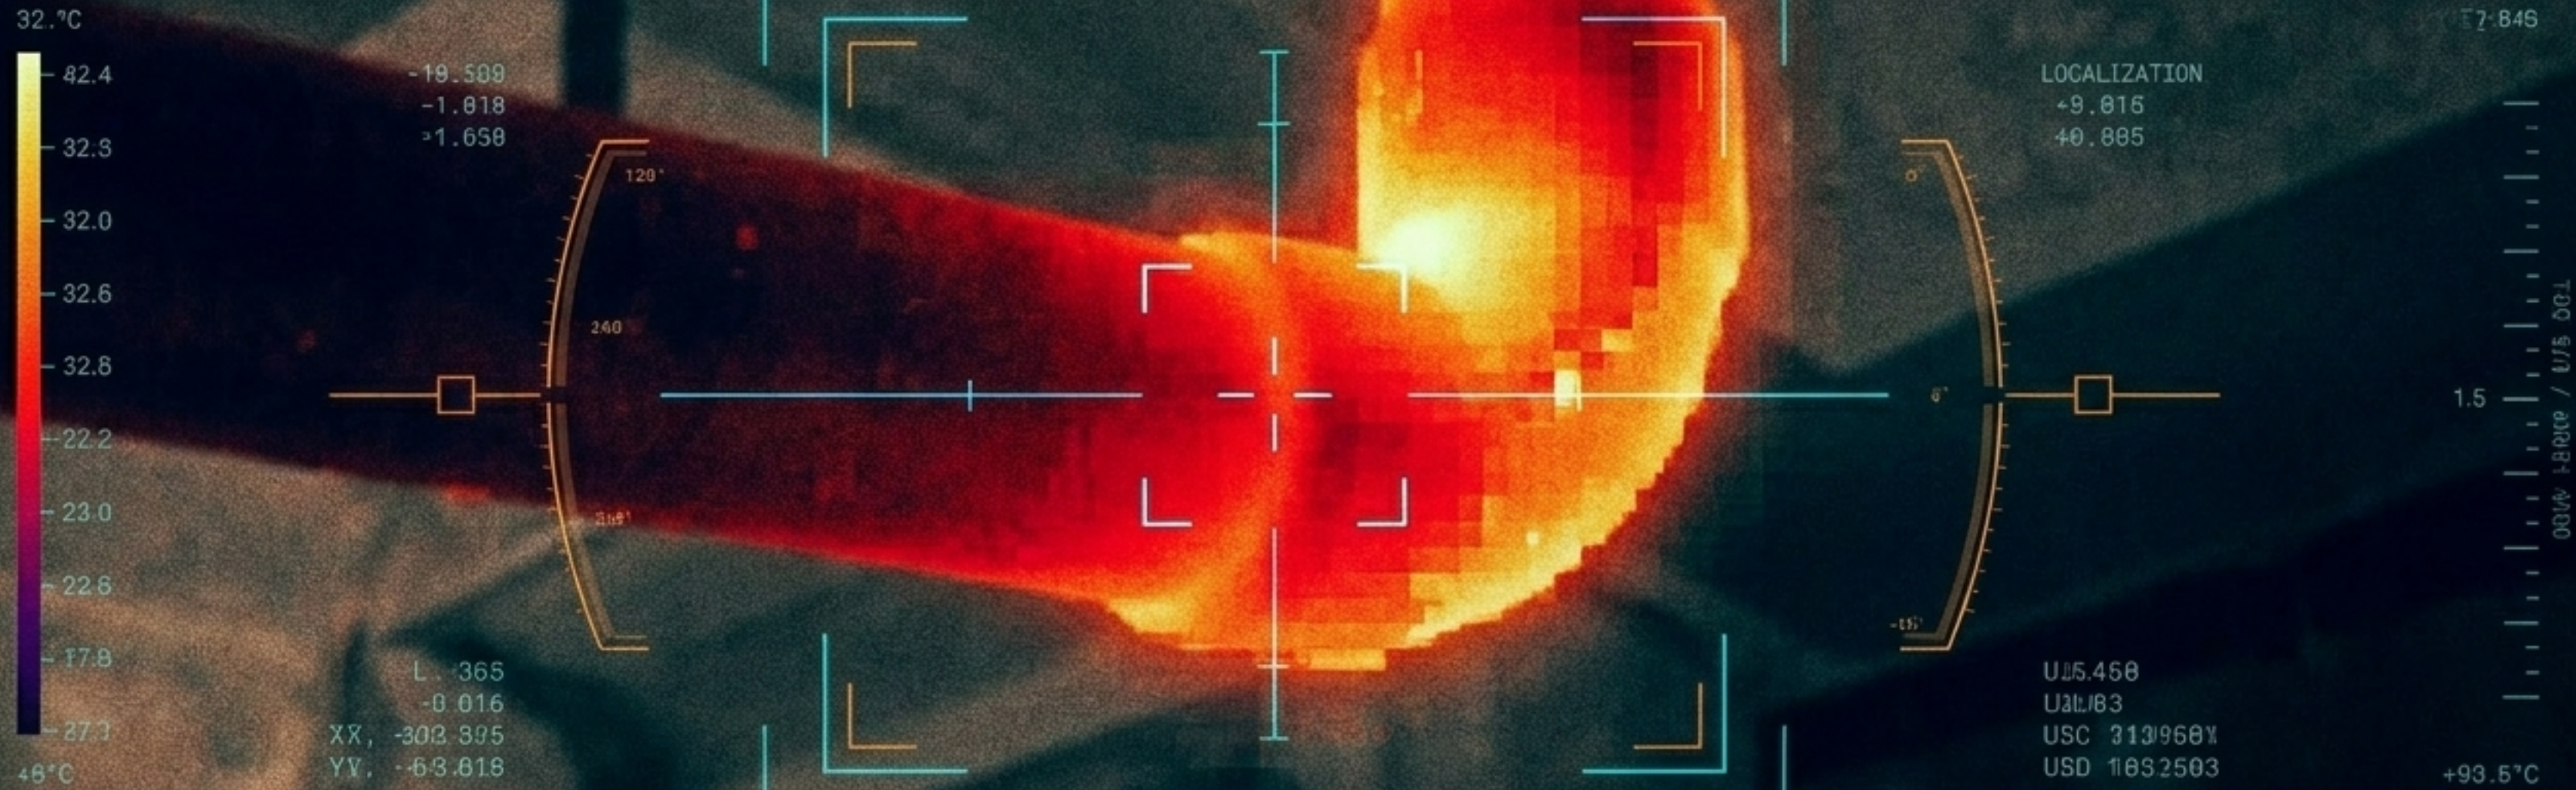

Under infrared, heat has nowhere to hide.

VFX / Camera: Split-screen architecture. Synchronized live-action and thermal tracking.

Dripping downstairs... the source is directly upstairs.

VFX / Camera: Extreme macro zoom into the thermal hotspot.

Scientific data. Precise down to the centimeter.

VFX / Camera: Cut back to live action.
Flashing thermal overlay (AR style)
painted directly over the physical
environment.

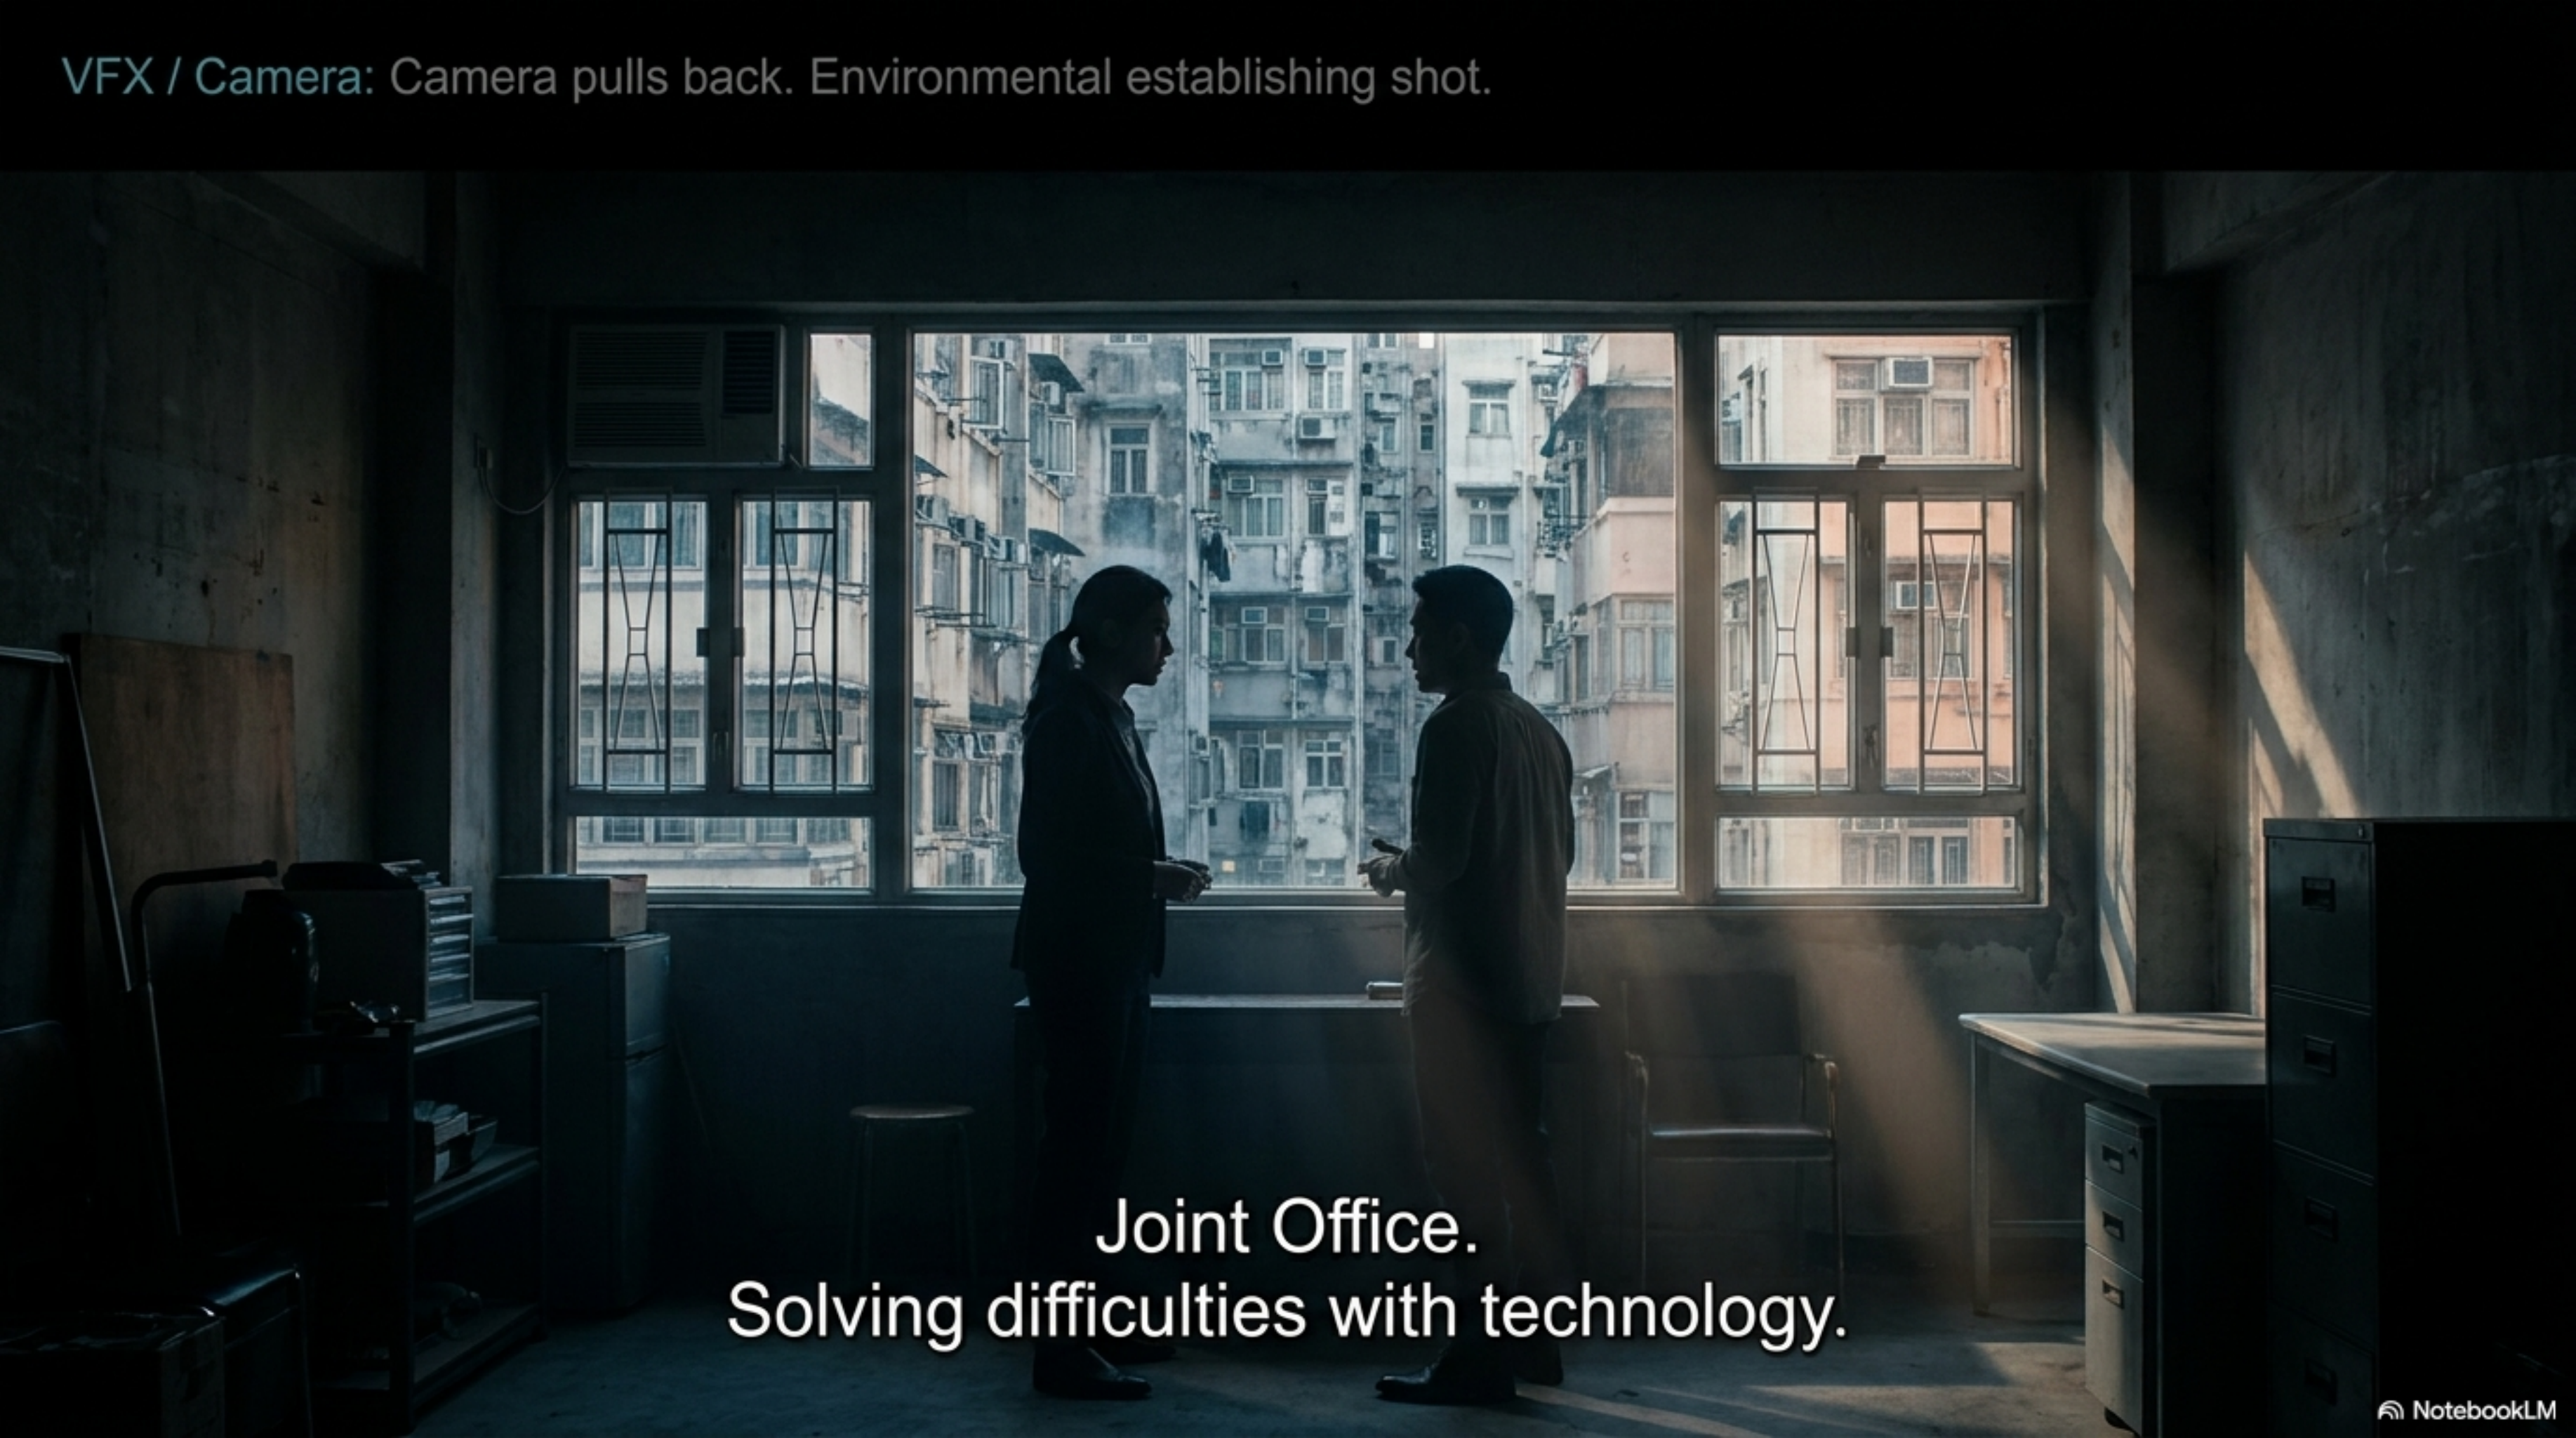

No more guessing.
The evidence is right here.

VFX / Camera: Rapid sequence edit
(Thermal lock -> Data panel -> Clipboard).

New procedures.
Authoritative certification.

VFX / Camera: Camera pulls back. Environmental establishing shot.

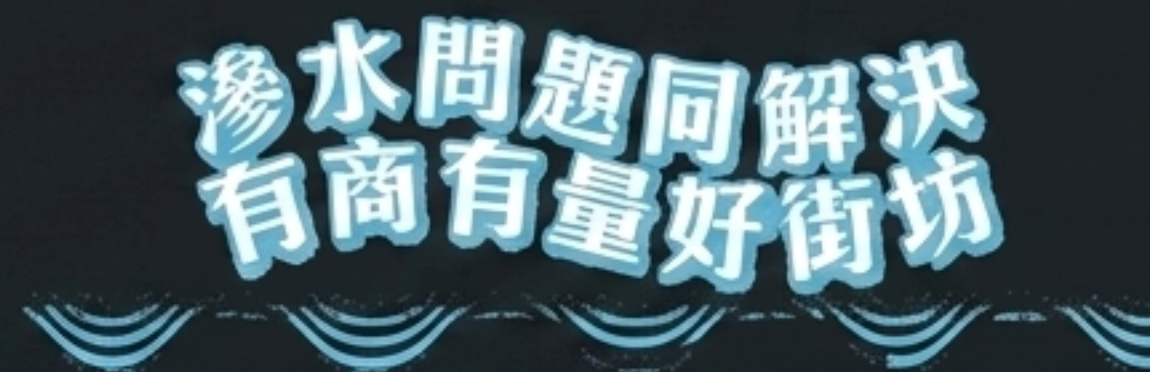

Joint Office.
Solving difficulties with technology.

VFX / Camera: Fade to black. Thermal pattern swells in the background.

THE INFRARED EYE (〔紅外線之眼〕)

Under infrared,
the source of water seepage is undeniable.
